

Brochesia develops a set of software solutions optimized to improve business efficiency. Our team specialized in the design and development, provides integrated solutions for all the latest wearable devices to streamline and support your company business processes.

Explore our applications

Brochesia presents several solutions optimized to improve business processes, taking benefit of the typical characteristics of the wearable devices as "Smart Glasses"

BView

Remote support

The solution make easier the communication a between technician or a person that operates in the field and an operator helpdesk that can provide support or remote assistance.

BTake

Logistic Support

The solution optimizes warehouse goods management during the manual reception or collection of the items, by minimizing the number of errors and optimizing the different logistics activities.

BGuard

Security Services

The solution has been devised to make easy audio/video documentation of events by police or security staff and facilitate direct communications between agents in the field and the operations center.

BMedia

Media Support

The solution allows a Press Agent, Reporter, PR or Event Organizer in making reportages, transmitting audio/video live streaming or recording and saving them into a cloud environment while moving.

BMed

Medical Support

The solution integrates several features with the secure data transfer: audio/video streaming, recording and certification of operations, the ability to send files, display of the medical reports. Easy to use, it can be integrated with existing applications and systems.

BSafe

Quality control

The solution is perfect for testing activities, insurance surveys, inspections, certifications, site audits and viability of buildings, public and private (schools, houses, churches and historical monuments), which require a large amount of qualified technicians who work in the field.

Brochesia offers a range of customized solutions thanks to its features
